Homework 10

CS 3793 – Fall 2008
Tom Bylander, Instructor

1. (100 pts.) List five interesting questions that the START natural language question answering system (http://start.csail.mit.edu/) can answer, and five simple questions you think that it should be able to answer, but it cannot answer or it provides an incorrect answer. Your questions should be original, i.e., not identical to those on the web page. Based on the results of these questions, describe the capabilities and the limitations of this system, both in terms of natural language and world knowledge.

2. (100 pts., shared extra credit) Do Exercise 24.6 in the book.
