How to boot and login to Ubuntu OS

- Right after powering up one of the computers in the CS lab, you will get a Boot Menu;
- Choose “Ubuntu 9.04 32-bit” from the below menu;
• Then you should see the below screen, click the only option from the list;

![Screenshot of Ubuntu 9.04 kernel 2.6.28-11 generic]

Use the ↑ and ↓ keys to select which entry is highlighted. Press enter to boot the selected OS or 'p' to enter a password to unlock the next set of features.

• At this point, you should get a log-in screen as shown below;

• Log-in to Ubuntu using your **username** and **password**. Once you logged in successfully, you should get to your desktop as shown below;
• Now, from the top left menu, you can go to **Applications → Accessories → Terminal** and get a terminal command prompt.
Terminal prompt looks like below. From the command line you could do many things such as listing the files in your current directory with “ls” command...
