Q8

CS 1713 Intro to Programming II

(10pt) Write a function to check if string s1 appears in string s2? If so return 1, otherwise return 0;

assume that both s1 and s2 are null terminating strings...

■ For example,

If s1="abcd" and s2="xyzaabb**abcd**xyz", then return 1.

```
int search_sub_str(char *s1, char *s2)
{
```
